

LECTURERS WITHOUT BORDERS

ABOUT

Lecturers Without Borders (LeWiBo) aims to connect schools and scientists, by bringing scientists into the classrooms both on- and offline to empower, inspire and motivate kids and teens and to provide a safe environment for a dialogue, discussion and exchange between scientists, teachers and school students. We are a community-driven, bottom-up initiative of scientists who reach out to schools and institutions, giving science outreach lectures for students.

OUR NETWORK

LeWiBo started in late 2017 with a small group of friends/colleagues who were reaching out to their personal and professional networks looking for contacts in local schools whenever they travelled for work or pleasure, aiming to organise outreach lectures wherever they were going. In 2020, we added online activities due to the travel disruptions caused by the COVID-19 pandemic. Our network has grown substantially since then! As of July 2022, we are:

IN OVER **1000** SCHOOLS
OVER **360** SCIENTISTS
IN OVER **52** COUNTRIES

OUR PROJECTS

We're currently working on new editions of two successful projects and on a brand new project aiming to spark the creativity of our students and encourage them to meet not only visiting scientists but also the STEM professionals in their own communities.

EPSC GOES LIVE FOR SCHOOLS

In 2020 and 2021, we organized online events for schools during the Europlanet Science Congress (EPSC), aiming at showing students what science congresses are. In 2022, we organised in-person events for six local schools in Granada, Spain, to complement our online activities!

CLIMATE CHANGE IN THE CLASSROOM

In 2021 and 2022, we also conducted a series of activities related to climate change and climate action in schools around Europe, which were very well received and we plan to continue expanding!

WOMEN IN STEM COMPETITION

For 2023, we plan to launch a competition for students around the world, aiming to increase the visibility of STEM professionals in every corner of the planet while also improving the (science) communication skills of the students!
